Re: Regarding the LightSquared Technical Working Group Report, IB Docket No. 11-109

Dear Ms. Dortch:

As a consultant for the Arizona Fire District Association, I understand that reliable communications are essential during emergency and crisis responses no matter where they may occur. I have been favorably impressed with the LightSquared Company's efforts to enhance the U.S. wireless industry with the creation of a new nationwide 4G-LTE wireless broadband network integrated with satellite coverage. LightSquared's satellite-backed network will benefit first responders by allowing them to maintain communications and coordinate relief efforts in disasters even if terrestrial wireless and landline systems are compromised. The satellite back up will also allow first responders in Arizona's rural and rather mountainous regions to maintain communications regardless of the terrain.

Unfortunately, the GPS industry believes this new service will interfere with its services. LightSquared has advised me that they are committed to resolving these concerns, so today I'm contacting you to encourage the Federal Communications Commission to continue to work with LightSquared and the GPS industry to resolve this issue.

Thank you for your time and consideration.

Sincerely,

Lee Miller
